Hiring Committee

Goldman Sachs

Dear Hiring Committee,

I am writing to express my keen interest in the Goldman Sachs Returnship® Program, specifically in the UI/UX Developer or Python Developer role. With a strong foundation in full-stack development, modern UI implementation, and backend scripting using Python, I am excited by the opportunity to re-enter the workforce with an institution as forward-thinking and inclusive as Goldman Sachs.

Over the past year, I have developed several real-world applications, including a decentralized skill certification platform and a vehicle registration system with token generation, using technologies such as React.js, Tailwind CSS, Node.js, and Python. These projects reflect my passion for building intuitive, user-centric designs as well as scalable, backend logic. I also have experience integrating RESTful APIs and managing application state with Redux-skills critical to both frontend excellence and robust Python development.

What draws me to Goldman Sachs is your strong culture of mentorship, innovation, and support for diverse career paths. I am especially inspired by the Returnship's focus on continuous learning and

reintegration, and I am confident that my adaptability, technical aptitude, and dedication to quality align well with your goals.

Thank you for considering my application. I would welcome the opportunity to contribute to your mission while growing as part of your collaborative and high-impact team.

Warm regards,

Abhinav Deokuliar
